TECHNICAL DATA	CORUDILAT BAND Dilation Band

PRODUCT DESCRIPTION

CORUDILAT TAPE is an elastomer-reinforced dilatation tape used in the insulation of building dilatations, joints of different building materials and water cracks.

AREAS OF USE

In foundations and curtains.

• In constantly wet areas such as pools,
• In water tanks, treatment plants and tunnels,
• At the ends of terraces, balconies, parapets and roofs,
• In expansion joints of underground floors,
• It is applied for the insulation of cold joints and expansion joints in curtain walls and floors.

PRODUCT FEATURES

It is very soft and easy to apply.

APPLICATION

The width of the tape should be greater than the width of the expansion joint. After the expansion joint is fixed to both surfaces, there should be enough excess to give an omega (Ω) shape. The expansion joint holes are pressed onto the surface so that they are on top of the Assembly Putty and some putty is allowed to come out of the holes. There should be no air gaps in between. Finally, enough putty is applied to the tape and the edges to completely cover the holes of the tape. The longitudinal joints are joined by a heat source or special adhesive, overlapping each other by 20 cm. Open flame and epoxy assembly mortar are not used for this process. The tape should not be moved until the epoxy adhesive hardens.

PACKAGING AND CONSUMPTION

Length: 25 meters/roll Width: 15,20,25,30 cm

STORAGE

Shelf life is unlimited. Rolls should be stored upright.
